

The sure proof for the existence of God

By Salih Cengel, April 2019

I'm going to provide certain evidence for the existence of an intelligent creation of the universe. An Intelligent Creation or creator, for me is that the Creator God, the one God as is proposed In the Koran. But whatever you want to call it, after my explanation it is undeniable that there is an intelligent creation of everything. I am going to prove the existence of God in two steps. The First step will at least as good as the arguments listed below. The Second Step Goes even further and is a sure and bright evidence.

I already had a lot of criticism about my theory. 'It was not conform the scientific method or I had no knowledge of the early universe'. Yes, I am familiar with the scientific method and yes I am familiar with the early universe but I have no lots of time to wide explain (yes I have deep deep thought about it) all this and by doing explaining all this widely it still changes nothing to my theory, to my summary. The result is still the same. At the end there IS a building material. While in the beginning of the universe material changed fast a few times, after the atoms where there they didn't changed for billion years.

Various people – Theologians, scientists, philosophers – have attempted to prove the existence of God or a god. For the interested there is a lot of literature available. I will mention the list without going into it because every argument is a book work in itself. But I will make a few additions:

- The Project of Natural theology
- The Leibnizian cosmological argument
- The Kalam cosmological argument
- The teleological argument: An exploration of the fine-tuning of the universe
- The Argument from consciousness
- The Argument from Reason
- The moral argument
- The Argument from Evil
- The argument from religious experience
- The ontological Argument
- The Argument from Miracles: A cumulative case for the resurrection of Jesus of Nazareth

They are good philosophies in themselves, but ultimately prove nothing, it's ultimately not even pencil sketches. In the eyes of the atheist the existence of the Universe, Universe and life, still could be all coincidence.

No What I'm going to tell is much stronger, much clearer and absolutely a certainty.

At the arguments, philosophies, there is a scientific supplement that I would like to mention. A leading scientist studying the 'Theory of Everything', came to the conclusion that there should be a god who invented all this. Yet, he did not want to believe in the existence of God. There are more such scientists. During their scientific studies they, when they realize that there is intelligent design, they often have extreme ideas to give an explanation of this unavoidable intelligent designer; There are top scientists who believe that we are in a simulation life made by our far distant future descendants who became gods. Yes, everything is possible. But God? No, that is not possible.

I understand those talented atheistic scientists - also their own works are ultimately not entirely clear, not tangible.

No what I'm going to tell is much stronger, much clearer and absolutely a certainty.

Then there are the wonders that God – In which I believe – has shown to the people, to the prophets.. Still I can move in the minds of the atheists. What people were seeing at the time – for example, walking on the water of Jesus, the sea that was parted by Moses etc. could be have been magic tricks, delusions or natural phenomena's, in the eyes of the past or modern atheist. There is still no evidence.

No What I'm going to tell is much stronger, much clearer and absolutely a certainty.

Let me Start,

The first step.

The atheist believes that the universe is naturally and simply created. The Big Bang (see Big Bang Theory) was the beginning. Then, according to the atheist, the first life arose, all by itself and just like that. First in simple single-cell form and then through the path of evolution branched out to present life in all its manifestations. Apart from the 'all by itself' thing, I can believe this.

I believe 100% in evolution theory, that's not a problem.

But let's look at the very first 'spontaneous' life. To the very beginning of that life. The first seconds, minutes. Because that first time is never discussed, it always goes over the time span of millions of years.

I can believe that life can arise by itself. But wait. Suppose life is created by itself. That chance is very small. A spark. But the Life Spark goes out. And that was life. Maybe you'll get it already. The chance that life will arise automatically and persists is very very small. In the atheistic imaging we talk about a life-spark that has the property to persist for a long period of time. The chance that life is created by itself is already small, the double probability that life is created by itself And WITH the default feature to "keep burning" for extended periods of time is even smaller. But imagine that the present life was created by itself and also with the property to keep 'burning' longer time. Then We are not there yet. We lack the necessary evolution to survive. So there should be a triple chance; (1) Life naturally arises with the (2) standard property to burn longer and with the (3) standard ability to evolve and multiply (the evolution of and multiplication In all its manifestations, cell division, sex, external influences Mutations etc.)! Think about it for a long time.

How possible is all this? How big is the chance? The longer you think about the very beginning of the very first life the more absurd the story of spontaneous life formation.

But well suppose it's all just happened. There were good circumstances, There was a spark of life, or a very special molecule, or a spark of life that ignited the special molecule, what ever, let your imagination run.. Certain atoms were connected and then the molecules concatenate spontaneously to each other, DNA was formed, they just began to cell dividing and multiply, evolution, millions of years further, the present flora and fauna is the result; I can believe this is God's work.

For The atheists who believe that it is all happened by itself, I continue with the second step. The step that clearly establishes that there is an intelligent creator.

The second step.

You see on the next picture, picture 1, a stone. Specifically a brick made by people to make houses and other buildings.

Picture 1, a brick.

Then on the next picture, Picture 2, you see a roof tile. Roof tiles are used on roofs of houses to carry rain.

Picture 2, a roof tile.

On Picture 3 We see a piece Of glass. Glass is also often used in buildings in windows.

Picture 3, a piece of glass.

Three building materials. An animal will maybe not understand what they are, but if an average human sees the building materials, it knows almost immediately what it is and what it is used for. Humans also knows that the building materials are not created by themselves, but that they are made by humans.

We continue. On Picture 4 we see a classic atomic model. It consists of protons and neutrons with an electron cloud around it. Simply said, the atom is the base building block of all that is (protons and neutrons are theoretically made up of even smaller particles but that goes beyond the scope of this story). Take a Look at the atom. Look at the shape and design. It looks more elaborate and more complicated than the building block built by people. Any of these ring a bell? Could this just and automatically have arisen? Or is this a piece of high tech building material designed by an intelligent designer, I call it God, where we also make use of?

Picture 4, an atom.

Someone who possesses some intelligence already understands it.

On Picture 5 We see a bunch of atoms together. Specifically, these are gold atoms, a gold molecule. Multiple atoms to each other we call a molecule. You see, atoms can be put together as building materials. Here is Clear Thought about.

Picture 5, a gold molecule.

On Picture 6 we see gold as we normally can visually perceive it.

Picture 6, a gold bar.

It is also possible to put different types of atoms together. Such as:

1 hydrogen atom (H) with 2 oxygen atoms (O₂) gives a water molecule. O-H-O

There are many combination possibilities.

There are also atoms that do not 'stick' anywhere, which creates other possibilities.

On Image 7 We have the so-called periodic table with all the current known elements, for example; Iron Atom (Fe), Oxygen atom (O), Helium atom (He) and so on.

Plate 7, the periodic table.

Group	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18			
Period																					
1	1	H																2	He		
2	3	Li	4	Be									5	6	7	8	9	10	Ne		
3	11	Na	12	Mg									13	14	15	16	17	18	Ar		
4	19	K	20	Ca	21	22	23	24	25	26	27	28	29	30	31	32	33	34	35	36	
5	37	Rb	38	Sr	39	40	41	42	43	44	45	46	47	48	49	50	51	52	53	54	
6	55	Cs	56	Ba	*	71	72	73	74	75	76	77	78	79	80	81	82	83	84	85	86
7	87	Fr	88	Ra	**	103	104	105	106	107	108	109	110	111	112	113	114	115	116	117	118
*Lanthanoids	*	57	58	59	60	61	62	63	64	65	66	67	68	69	70						
**Actinoids	**	89	90	91	92	93	94	95	96	97	98	99	100	101	102						

There are thus many kinds of atoms (visualize in mind the atomic model). With these many kinds of atoms many different combinations can be made,

The universe, the stars

We and the world around us, trees, plants, animals

What people produce, buildings, machinery, tools

Everything is made of atoms. Of those spheres of protons and neutrons surrounded by electrons. Consider those 3D models of atoms. Place the brick made by man and the atom model beside each other. And compare!

That atoms would be created simply by themselves is very much less likely than that life arose itself.

Atoms are high-tech construction materials. Not only the shapes are exceptional, but also the properties with which you can attach atoms to each other are very special. Again, how big is the chance that such things spontaneously arise? These intricate forms, with these intricate properties. Actually it was very simple. The evidence lay all the time (modern time) right in front of us.

The atoms are THE proof of an intelligent creator of the universe, I call it God.

It's crystal clear. Anyone who doesn't see this does not want to see it.

Behold God!

A better proof of the existence of God has never been delivered in human history on planet Earth.
